9. Authorization for this examiner's amendment was given in a telephone interview with Giles Turner on 12/13/2010.

Art Unit: 1714

10. The application has been amended as follows:

In Claim 1, after the phrase “bottom surface of each of the air knife assemblies”, please replace the phrase “so has” with the following:

--so as--.

In Claim 1, after the phrase “led to collide with the fluid from”, please replace the phrase “the adjacent” with the following:

--an adjacent--.

In Claim 21, after the phrase “formed in the rear portion of said air knife units, and then,” please insert the following:

--the fluid--.

In Claim 21, please replace the phrase “front portion of the air knife units or said fluid”, with the following:

--front portion of the air knife units or fluid from an adjacent air knife--.

***Reasons for Allowance***

11. Claims 1-5, 7, 8, and 21-25 are allowed.
12. The following is an examiner's statement of reasons for allowance: The prior art does not render or suggest a method for removing deposit as claimed. The closest prior art of record is that of Shima (JP 09-162147).
13. Shima teaches a method for removing deposit from a substrate comprising removing deposit that has attached to a main surface of the substrate using a number of air knife assemblies in which a slit portion is formed at the bottom surface so that a fluid can be discharged in band form when each air knife assembly is positioned so that the bottom surface thereof faces the main surface of the substrate and a fluid is discharged from the slit portion. Shima also teaches forming a fluid introduction path to pass the fluid between a main surface of the substrate and the bottom surface of each of the air knife assemblies.
14. However, Shima teaches that the deposit is swept off of the edges of the substrate. That is, Shima does not teach the step of discharging fluid from the slit portion to pass through the introduction path so that the fluid is led to a wall surface that is formed to face the front portion of the air knife assemblies, nor does he teach that the fluid is led to collide with the fluid from an adjacent air knife assembly that operates as a wall surface. Since Shima forms a boundary region between layers of different types of deposits by pushing the deposits off of the substrate in opposite directions, Shima does not teach or suggest the step of leading the deposit away from the surface together with the fluid via a fluid lead-out path which is formed between each air knife assembly and

Art Unit: 1714

the wall surface or fluid from the adjacent air knife so that the cross section of the flow path is greater than that of the fluid introduction path, as required by the claim.

15. Further, it is noted that Shima does not teach or suggest a clearance between the air knife units and the main surface of the substrate is adjusted using the venturi effect between the air knife units and the main surface of the substrate when the fluid passes through the fluid lead-out path in order to support the air knife units relative to the substrate surface in a fluctuating manner, as required by Claim 21.

### ***Conclusion***

16. Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
